About

Ambitious Computer Science student with strong expertise in Java, web development, and AI technologies. Proficient in designing and building scalable, secure, and efficient applications using object-oriented programming methodologies. Experienced in developing and deploying APIs, creating AI-driven solutions for real-world problems, and implementing full-stack applications with a focus on performance and user experience.

Details

Nationality _____ Indian

Place of Birth _____ Lucknow

Date of Birth _____ 21-11-2003

Education

High School & Intermediate, City Montessori School, Lucknow

April 2009 — May 2021

- Achieved 95.6% in class 10th
- Achieved 97.5% in class 12th

B-Tech, Vellore Institute of Technology, Vellore Campus

September 2022 — 2026

- Currently pursuing Engineering in Computer Science.
- Currently having a CGPA of 8.82

Skills

Java | C/C++ | Python | Deep Learning | Machine Learning | Scikit-Learn | Tensorflow | Keras | Neural Network | Transformers | Natural Language Processing | HTML & CSS | React-JS | JavaScript | MongoDB | Flask | Figma

Experience

Tiffin, Vellore

February 2024 – November 2024

- Led the development of an AI-driven dietary model as Chief AI Engineer in a very early startup Tiffin, fostering a collaborative and inclusive environment.
- Leading the development of an AI model to forecast users' dietary needs.
- The concept is pre-incubated under VITTB.

Projects

DockKaro

October 2024

- A platform to manage and analyse PDFs with features like compression, merging, conversion, encryption/decryption, and LLM-powered content analysis.
- Built using Flask (Python) for the backend and JavaScript for the frontend.
- Integrated Google Generative AI for advanced PDF analysis and question answering.
- Leveraged libraries such as pypdf, fitz, and google.generativeai for seamless functionality.
- Secured API keys and configurations using dotenv, with efficient file handling via BytesIO and zipfile.

Colors

July 2024

- Developed a GAN using TensorFlow to colorize black-and-white images.
- Trained on a dataset of 8,000 images, achieving realistic and vibrant colorization results.
- Demonstrated proficiency in deep learning, image processing, and advanced neural network architecture.

InstaCap

July 2024

- Built a Seq-Seq model using transfer learning on the INCEPTION-V3 model to generate image captions.
- Trained on 40,000 Instagram images to predict the best captions.

Faces-DCGAN

July 2024

- Designed a Generative Adversarial Network (GAN) to generate new human face images.
- Trained the model on a dataset of human faces using a discriminator and generator.

Dog's Breed

May 2024

- Created a deep learning project using TensorFlow and Keras to predict dog breeds with a CNN.
- Achieved a validation accuracy of 97% without using transfer learning.

WordEmotion

May 2024

- Developed WordEmotion to predict emotions based on text using deep learning and LSTM.
- Built a web interface with Flask, HTML, CSS, and JavaScript, with backend prediction powered by Python.

FlowTalk

December - January 2024

- Created a real-time chatting site named FlowTalk using React JS and Firebase.
- Implemented features like block/unblock and file/image sharing utilizing Firebase Storage.

Certificates:

Artificial Intelligence using Google TensorFlow Powered by google developers.

Certificate id: CC-AI-2024-5140

Certificate Link: [link](#) 🔗

Description:

- Completed training on foundational and advanced Machine Learning algorithms, including Deep Learning architectures.
- Gained hands-on experience with Artificial Neural Networks (ANNs), Convolutional Neural Networks (CNNs), and Recurrent Neural Networks (RNNs).
- Developed practical skills in implementing and optimizing AI models using Google TensorFlow.
- Focused on building, training, and evaluating deep learning models for real-world applications.

Languages:

English Very good command

Hindi Native Speaker
